DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claim 3 is rejected under 35 U.S.C. 102(e) as being anticipated by U. S.

Publication No. 2003/0171668 U. S. Application No. 10/377,800 to Tsujino et al.

3. Regarding Claim 3, Tsujino teaches an ultrasonic imaging device comprising: an control unit which sends ultrasonic pulse signals for forming a ultrasonic beam to be given to a scanned object and receives a received ultrasonic beam formed from the ultrasonic pulse signals reflected from the scanned object; a transmitted ultrasonic beam former which forms transmitted ultrasonic beam in response to the ultrasonic pulse signals (Fig. 1); a ultrasonic probe which receives an output from the transmitted ultrasonic beam former via a transmission/receiving separator and sends the transmitted ultrasonic beam to the scanned body (Fig. 1 element 2); and a receiving beam former which receives the ultrasonic pulse signals reflected by the scanned object received with the ultrasonic probe via the transmission/receiving separator and forms the received ultrasonic beam; wherein the control unit has a program for synthesizing B-mode image data of the scanned object imaged from a plurality of angular directions

against the scanned object and displaying the synthesized image, and computes correlation between the received ultrasonic beams for frames imaged from the plurality of angular directions, and computes correlation between the received ultrasonic beams for frames imaged from the plurality of angular directions, and selects a reference frequency for detection for the received ultrasonic beam according to a result of the computation of the correlation, and the control unit sets the reference frequency to a value equal to a central frequency of the ultrasonic pulse signals when the correlation value is equal to a prespecified value. (Abstract; Fig. 1; and Claims 1-3 and 10)
